

MATRIX-COVER®

Floating Cover

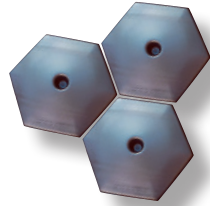

MATRIX-COVER®

Floating Cover

MATRIX-COVER® Effective covering of liquids, securing reduction of

- Odor
- Emission
- Heat Loss
- Evaporation
- Organic growth

MATRIX-COVER® - has for many years proved it's worth as an effective solution for covering i.e. slurry tanks, containers

MATRIX-COVER® - secure up to 97% covering of the surface, and thus up to 95% reduction of i.e. Emission, odour and evaporation

MATRIX-COVER® - consists of hollow hexagonal-shaped floating elements, making a floating lid on the liquid surface

MATRIX-COVER® - is simply poured onto the liquid surface, where after they distribute and organize automatically, creating a coherent cover

The floating elements have a "locking mechanism" on each side, making the elements interlock

MATRIX-COVER® - secure access to the liquid. When i.e. agitating / mixing the floating elements will move and give way for the equipment

Delivery and installation

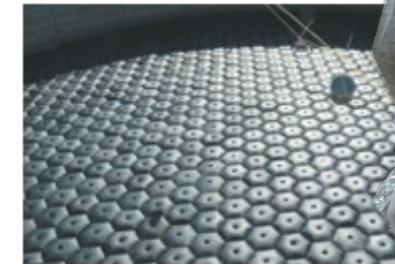

MATRIX-COVER® is delivered on pallets.

The floating elements are poured onto the liquid surface where they automatically will distribute and organize.

It is recommended to add 90% of the total area and have those spreading out and organizing. The remaining floating elements are hereafter added until a full cover is achieved.

In areas with strong winds, it is recommended to install a net in order not to have any element being removed.

Dimensions	Pallets
Height	250 cm
Breadth	100 cm
Length	130 cm
Weight	144 kg
Area	24 m ²

MATRIX-COVER® - Technical specifications

Material HDPE, UV-protected
Color Black
Warranty 8 years (exp. lifetime 20 years)

Diameter 462 mm
Height 90 mm
Weight 740 g/pcs
Area 7 pcs / m²

Tested by LugtTek A/S, 8830 Tjele, Denmark

Manufacturer Gravenhorst Plast A/S, Denmark
